

Hello! My name is Omprakash Diwathe. I am from Pune, Maharashtra, and I have completed my graduation from RTM University.

I have over three years of experience in manual software testing, focusing on manual and API testing, as well as batch job processing.

I am skilled in using test management tools like Jira and Azure DevOps. I worked on the smoke testing, sanity testing, regression testing, system testing and UAT testing. I have a basic knowledge of cloud platforms like Pivotal Cloud Foundry (PCF). Additionally, I am familiar with SQL and Unix for backend testing and data validation.

I am proficient in using test management tools like Jira and Azure DevOps. I've conducted smoke testing, sanity testing, regression testing, system testing, and UAT testing, API testing as well as batch job processing.

and also have a basic knowledge of cloud platforms like Pivotal Cloud Foundry (PCF). Additionally, I am familiar with SQL and Unix for backend testing and data validation.

I have worked in Agile methodologies, actively participating in sprint planning, stand-ups, sprint demos, retrospectives, and peer reviews to ensure testing aligns with project goals and to improve our processes.

My strengths include designing and creating test cases, executing test cases, finding and reporting bugs, creating test summary reports, maintaining testing documents in Azure tools, and helping to improve the overall quality of products.

In my work, I use various testing tools like Postman, Jira, Azure, Control-M, FileZilla, Swagger, Putty, Mainframe, and Beyond Compare.

I have experience in the investment banking and telecom domains and have contributed to projects like Mutual Fund Automation, RoboForex, and Netflow Audit.

I have worked closely with development teams to ensure timely and efficient release cycles.

I am excited to bring my manual testing skills to your team and contribute to building high-quality products!
